We need more specifics about what is going wrong. Do you have admin privileges on your computer? Have you tried `⌘-G` from the Finder and then typed `/Volumes` in that window? You can also open a Terminal window, type `cd /Volumes` and then if that works type `open .`. At the bottom, click to show Library folder (a period). If none of those work, then you need to set up that account with privileges to access root folders, but I think it should at least ask you to authorize when you try `Go to Folder`.

Edit: Just a guess, but from the Finder try going to the View menu `Show View Options` (or press `Command-J`). Can't see dmg volume in finder
